

MyOS — Personal Operating System

Product Requirement Document (PRD)

1. Project Overview

Project Name

MyOS

Project Type

Personal Operating System (Personal Productivity & Workspace Management Web Application)

Description

MyOS is a centralized personal web application designed to organize and manage daily life, workspaces, tasks, schedules, finances, notes, documents, and quick-access tools in one unified platform.

The system acts as a personal digital workspace and command center, allowing the user to:

- Manage personal and work-related tasks
- Organize multiple workspaces and portals
- Track finances and productivity
- Store notes, wiki pages, and documents
- Access frequently used links
- Synchronize schedules with Google Calendar
- Maintain backups and file storage integrations

The platform is designed for:

- Personal use
- Private productivity management
- Multi-workspace organization
- Long-term knowledge storage

2. Project Goals

Primary Goals

- Centralize personal productivity tools
- Improve organization and task tracking
- Reduce scattered information across platforms
- Create a personal digital operating system
- Provide responsive cross-device experience
- Support future AI integrations

Secondary Goals

- Personal analytics
 - Smart automation
 - Knowledge management
 - Workspace launcher portal
 - Long-term scalable architecture
-

3. Core Modules

Module 1 — Dashboard

Purpose

Provide centralized overview of all important information.

Features

- Daily summary
- Upcoming schedules

- Pending tasks
- Recent notes
- Finance overview
- Workspace quick access
- Quick links panel
- Activity overview
- Notifications/reminders
- Search bar

Dashboard Widgets

Widgets Include

- Today's Tasks
- Calendar Events
- Workspace Status
- Finance Summary
- Recent Documents
- Quick Notes
- Recent Activity
- Goals Progress
- Productivity Overview

Functional Requirements

- Dynamic widget arrangement
 - Hide/show widgets
 - Responsive layout
 - Real-time updates
-

Module 2 — Todo List (Tracking)

Purpose

Track personal and work-related tasks.

Features

- Create/edit/delete tasks
- Task categories
- Priority levels
- Due dates
- Recurring tasks
- Task status tracking
- Checklist support
- Tags system
- Task filtering
- Search tasks
- Task progress percentage

Task Status

- Pending
- In Progress
- Completed
- Archived

Views

- List View
- Board/Kanban View
- Calendar View

Categories

- Personal
- Work
- Finance
- Health
- Learning
- Custom Categories

Optional Future Features

- AI task suggestions
 - Auto-priority
 - Smart reminders
-

Module 3 — Workspaces

Purpose

Organize multiple workplace environments and resources.

Features

- Workspace creation
- Workspace dashboard
- Company/workplace info
- Internal portal links
- Notes and SOP storage
- Workspace-specific tasks
- Workspace-related documents
- Workspace activity logs
- Workspace status tracking

Workspace Data

Each Workspace Includes

- Workspace Name
- Description
- Company/Organization
- Portal Links
- Notes
- Attachments
- Related Tasks
- Related Documents
- Contacts
- Workspace Color/Icon

Example Use Cases

- Company A Portal
 - Client Dashboard
 - Development Workspace
 - Personal Projects
-

Module 4 — Calendar

Purpose

Schedule and manage events and activities.

Features

- Monthly calendar
- Weekly calendar
- Daily agenda
- Event management
- Schedule reminders
- Recurring schedules
- Event categories
- Time blocking

Google Calendar Integration

Sync Features

- Read Google Calendar events
- Create events from MyOS
- Two-way synchronization
- Multiple calendar support

Calendar Event Types

- Meeting
- Work Shift
- Personal Event
- Deadline
- Reminder

Module 5 — Finance

Purpose

Track personal financial activities and expenses.

Features

- Expense tracking
- Income tracking
- Budget management
- Monthly reports
- Financial analytics
- Category management
- Subscription tracking
- Savings tracking

Expense Categories

- Food
- Transport
- Shopping
- Utilities
- Software
- Business
- Entertainment
- Other

Reports

- Monthly spending chart
- Category breakdown
- Expense trends
- Savings progress

Future Features

- AI expense analysis
 - CSV import/export
 - OCR receipt scanning
-

Module 6 — Notes / Wiki

Purpose

Personal knowledge management system.

Features

- Rich text editor
- Markdown support
- Wiki pages
- Tags system
- Folder organization
- Search notes
- Pin important notes
- Note linking
- Revision history

Use Cases

- SOP documentation
 - Troubleshooting notes
 - Learning notes
 - Knowledge archive
 - Personal wiki
-

Module 7 — Documents

Purpose

Manage files and document storage.

Features

- File upload
- File categorization

- Preview documents
- Search documents
- File tagging
- Version tracking
- Download/share support

Supported File Types

- PDF
- DOCX
- XLSX
- Images
- Videos
- ZIP
- TXT
- Markdown

Storage Strategy

Metadata Storage

Supabase Database

Actual File Storage

Google Drive Integration

Module 8 — Quick Links

Purpose

Centralized launcher for frequently used websites and tools.

Features

- Save website links
- Categorized shortcuts
- Workspace-related links

- Search links
- Open in new tab
- Custom icons
- Drag-and-drop ordering

Categories

- Work
 - Development
 - AI Tools
 - Cloud Platforms
 - Finance
 - Personal
 - Entertainment
-

Module 9 — Settings

Purpose

Manage application configuration and personalization.

Features

- Profile settings
- Theme settings
- Notification settings
- Workspace preferences
- Backup settings
- Google integrations
- Security settings
- Export/import data

Themes

- Light Mode
- Dark Mode
- System Theme

Security

- Authentication
 - Session management
 - Data export
 - Backup control
-

4. Technical Stack

Frontend

Framework

- [Next.js](#)

Styling

- [Tailwind CSS](#)

UI Library (Recommended)

- [shadcn/ui](#)
-

Backend

Database

- [Supabase](#)

Database Type

- PostgreSQL

Authentication

- Supabase Auth

API

- Next.js API Routes / Server Actions
-

File Storage

Primary Storage

- [Google Drive](#)

Stored Content

- Images
 - Videos
 - PDF files
 - Attachments
 - Workspace documents
-

Backup System

Backup Destination

- [Google Sheets](#)
- Google Drive JSON backups

Backup Types

- Tasks backup
- Finance backup
- Notes export
- Workspace export
- User settings export

Backup Frequency

- Daily automated backup
 - Manual backup option
-

5. Responsive Design Requirements

Requirement

The application **MUST** be fully responsive and optimized for:

Desktop Native View

- Large dashboard layout
- Multi-column grid system
- Sidebar navigation
- Advanced data tables

Web Native View

- Browser optimized
- Responsive containers
- Dynamic scaling

Mobile Native View

- Bottom navigation
- Touch-friendly UI
- Swipe interactions
- Mobile-first optimization

iPad / Tablet Native View

- Adaptive layouts
 - Split panel support
 - Optimized touch controls
-

6. UI/UX Requirements

Design Style

- Modern
- Clean

- Minimal
- Productivity-focused

UI Features

- Dark mode
- Smooth animations
- Responsive transitions
- Glassmorphism (optional)
- Widget-based dashboard

UX Priorities

- Fast navigation
 - Minimal clicks
 - Centralized access
 - Clear hierarchy
 - Search-first experience
-

7. Authentication & Security

Authentication

- Email login
- Google login
- Session management

Security Features

- Row-level security
 - Secure API routes
 - Protected file access
 - HTTPS only
 - Environment variable protection
-

8. Search System

Global Search

Search across:

- Tasks
- Notes
- Documents
- Workspaces
- Quick Links

Search Features

- Instant search
 - Tag search
 - Filter search
 - Category search
-

9. Notification System

Notification Types

- Task reminders
- Calendar reminders
- Finance alerts
- Workspace updates

Delivery Methods

- Browser notifications
 - In-app notifications
-

10. Database Architecture

Main Tables

Core Tables

- users
 - tasks
 - task_categories
 - workspaces
 - workspace_links
 - calendar_events
 - finance_transactions
 - finance_categories
 - notes
 - documents
 - quick_links
 - notifications
 - settings
-

11. File Management Architecture

File Flow

User Upload
↓
Google Drive Storage
↓
Store Metadata in Supabase
↓
Retrieve Through Secure API

12. Backup Architecture

Backup Flow

Supabase Database
↓

Scheduled Export

13. Future Features

AI Integration

Using:

- [Google Gemini API](#)

AI Features

- Smart task suggestions
 - AI note summarization
 - Finance insights
 - Smart search assistant
 - Workspace knowledge assistant
 - Auto-generated reports
-

14. Performance Requirements

Performance Goals

- Fast page loading
- Lazy loading
- Optimized images
- API caching
- Minimal bundle size

Technical Targets

- Lighthouse score > 90
 - Mobile optimized
 - SEO friendly
 - Progressive enhancement
-

15. Deployment

Hosting

Recommended:

- [Vercel](#)

Environment

- Production
 - Staging
 - Development
-

16. MVP Scope (Version 1)

Must Include

- Authentication
- Dashboard
- Todo List
- Workspaces
- Calendar
- Finance
- Notes/Wiki
- Documents
- Quick Links
- Responsive Design

Can Be Added Later

- AI assistant
 - Analytics dashboard
 - Advanced automation
 - OCR
 - Mobile app
 - Offline mode
-

17. Project Vision

MyOS aims to become a complete personal digital operating system that centralizes productivity, organization, knowledge management, and workspace operations into a single scalable platform optimized for long-term personal use across all devices.
